# Torque Tube Kit

MECO  
SEALS

MADE IN  
  
THE USA

## MECO Clamp-Seal Adjusting Kit

The MECO Torque Kit offers accurate and repeatable adjustments for each of MECO's clamp style seal models. MECO clamps are used to adjust the seal's dynamic seal face pressure – an important factor in seal performance and longevity. In addition to a precision Wera adjustable torque screwdriver, the Torque Tube Kit includes a 7mm nutsetter to engage the clamp head, as well as 6" and 10" bit extensions to facilitate easy access to adjusting clamps. The contents of the MECO TT are packaged in a convenient plastic tube with instructions for proper usage. Upon request, each tool is also available for individual purchase.

### Inside the MECO TT:

Wera 7440 Adjustable Torque Screwdriver (0.3 - 1.2 Nm)

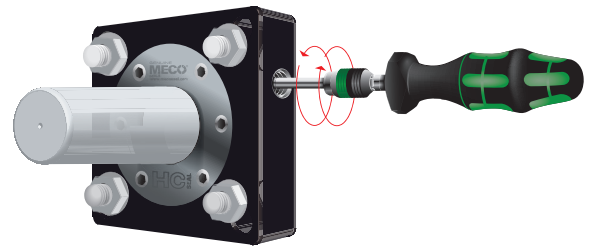

Wera 7mm x 65mm Nutsetter

6" Hex Extension

10" Hex Extension

Refer to the Torque Tube instructions as well as the installation instructions included with your seal for proper use.
